

Dear sustainability enthusiasts,

Welcome to the 14th issue of the newsletter that we publish as part of the climate protection project. Here you will find small reports from the climate protection and sustainability cosmos of the university at more or less regular intervals.

If you have joined us recently (yay!), you can have a look at the old issues on the [website](#).

Job board

When can we finally use the Deutschlandticket as a job ticket? How can the public transport connection to the university be improved? When will more parking spaces for bicycles be offered? There is no area in which we receive more questions than in the area of everyday mobility. At the same time, there is hardly any other area where there are so many actors at work that we have to deal with. To enable us to deal with this topic in a targeted manner, we have just advertised a position in climate protection management that will be devoted entirely to mobility. Help us find a great person for the position and feel free to forward the ad - or just apply yourself! Everyone here is very nice and there's cake every now and then. [Go to the job posting](#).

City cycling 2023

For years, the university has participated in the annual city cycling event. Also this year we are participating from 08. to 28.09. and of course we want to take the first place again. More information will follow, but you can sign up for it now and register in the group "University of Oldenburg", then you can't miss it. [Ready to go!](#)

Climate adaptation

Just in the last days it could hardly be suppressed - the climate crisis is here and has a significant impact on our everyday life. Because the university cannot access the federal funding programs for the establishment of a climate adaptation management, we have to help ourselves in another way. Four theses related to the university are currently being written as practical examples, and we will be happy to share the results with you.

Greenhouse gas balancing third-party funded project

As the [Sustainability Network of Universities in Lower Saxony, HochNiNa](#), we have received approval for a third-party funded project from the Ministry of the Environment in North Rhine-Westphalia. The aim is to develop a standardized framework so that universities do not have to prepare their greenhouse gas balances in different ways, as has been the case up to now - or can be introduced to it at all if they do not yet have a balance sheet. After about 14 months (keyword: lean application procedure), the notification of approval - you read that right - has finally arrived by fax. The half-staff position associated with it can start on 01.08. and we are pleased that it is located for the network with us at the University of Oldenburg.

Have a nice summer in spite of everything or just because of it, we'll read you again soon.
